

How do I connect to eduroam on Windows 10?

Many people will be able to connect by using the Windows built-in menus.

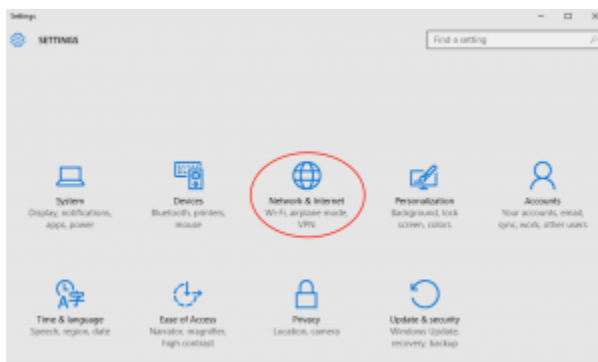

1. Go to the Start menu located at the bottom left of your screen

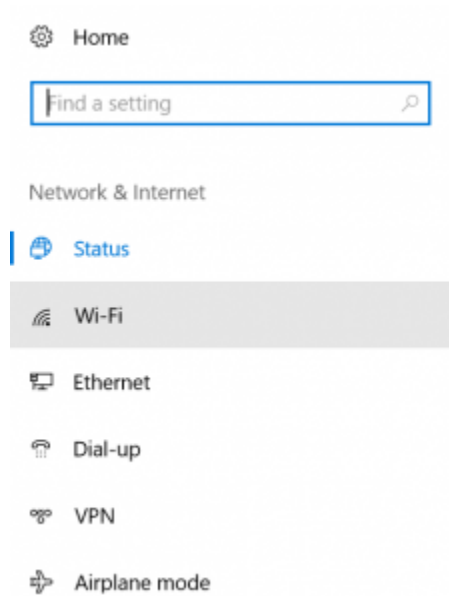

2. Click on the Settings icon

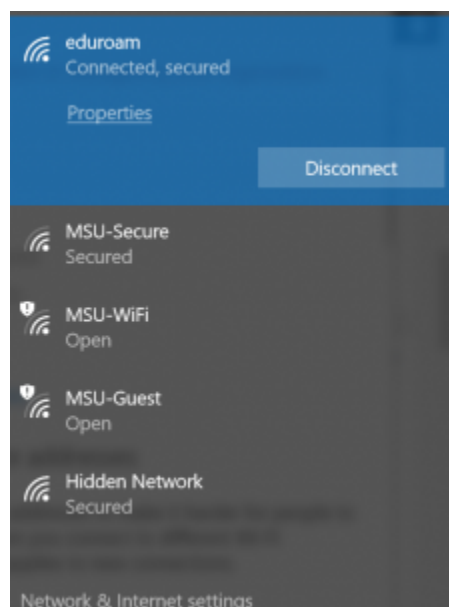

3. Click Network & Internet

4. Select **WiFi** from the top left.

5. Make sure WiFi is on and select **eduroam** from the list of available WiFi networks.

6. Press **Connect**.

You will be prompted for a username and password. Enter your full email address; username@yourcollege.edu.

If your computer has not yet received the eduroam certificate validating your connection is encrypted, it may indicate a **Windows Security Alert** warning message indicating “The connection attempt could not be completed.”

You can press a button to view Details.

Press **Connect** to continue.
